1: Petrullo E-3 (1933-34) 1939 SS19 Yaruro SS19

251 During the rainy season the seed of the chigua is gathered. It is crushed, toasted, and stored in small quantities in the same way as the changuango, provided, of course, that a spot is found high enough to keep it dry.

Social Organization and Social Customs

596 616 622 791 554 Economically the family hunting group is the basic unit, as has been shown in the previous chapter. In social matters, however, it is the moiety. Each family hunting group recognizes a headman and each moiety recognizes a chief who in all cases is the shaman. Both of these positions of authority are acquired only through personal merit. There is no inheritance of chieftainship or shamanism. If the nephew of a headman shows ability he may inherit his uncle's position, and theoretically this is the scheme. In natural practices we find that not only the Yaruros but perhaps a great many other primitive peoples are very realistic and are loath to give authority to an individual whose personality does not stand for leadership.

616 428 Every Yaruro is born in either the "Itciai" or "Puaná" moiety. Descent, with its social affinities, prerogatives, and obligations, being traced through the female line, the child belongs to its mother's moiety. Nothing is inherited from the father, who belongs to the other moiety, except obligations.

616 773 There is a legend among the Yaruros that two young men not finding any marriageable girls among their own people mated with the Jaguar and with the Snake. From these two unions are descended the two moieties. Since only among animals do brothers and sisters mate it has become a rule that two descendants of the Jaguar, "Itciai", cannot marry with each other; nor can two descendants of the Snake, "Puaná", marry with each other. They must seek a mate from the other group. Thus an "Itciai" must always marry a "Puaná", and vice versa. Cross-cousin marriage solves this problem.

582 604 In this system, therefore, a man's children belong to his wife's moiety, from which he is socially excluded. His sister's children, on the other hand, are socially close to him since they too inherit moiety membership from their mother which is the same as his own. Deprived of his own children to carry on his traditions, a man looks to his sister's children to take their place. It is his nephews who will help him in hunting, who will come to his defence, who will take care of him in old age. As if in payment of such attention he gives them his daughters in marriage. Thus his sisters' sons become his sons-in-law.

621 596 Yaruro society is built around the hunting group, which in numbers is never stable. The hunt and the gathering of food such as roots and fruits calls for a certain amount of cooperative effort, but

make it usable. The need to eat makes woman's work more or less continuous, while the nature of production does not make man's work continuous. As long as there is food in the village, the man may rest, help his wife, or engage in non-food production such as canoe-making, as he chooses. [461]

Objects used by men are men's property and are inherited by the men; objects used by women are women's property and are inherited in the women's line. Immovable property such as gardens and houses are said to be inherited by the decedent's children of both sexes. Male animals such as boars and dogs, are owned by men, the females by women. Thus the division of property is as sharp as the division of labor; a fact reflected throughout the ideology. 428 ● [422] [231]

No two producers produce the same quantity or inventory of goods, especially as each has great freedom to concentrate in the productive activities he prefers to the exclusion of others. Yet each producer contributes to household and community in what is felt to be equivalent value since most foods are considered good and of equal worth. Each household producing unit distributes supplies of raw or cooked foods to other households along the lines of coresidence and kinship. In this way, all villagers, as consumers, receive the same total amount of food and no one goes without. Thus all persons and households in the community are equivalent as producers, distributers, and consumers. All are tied together in a loosely formalized network of coordinate reciprocal exchanges and obligations in which scales of value are not necessary, since each person contributes approximately equally of all values. In this situation, accumulation of wealth by individuals is out of the question and management of production or of wealth distribution is unnecessary. Consequently, there are no economic status differentiations and no effective leadership among the Yaruro. 433 592 621 [435] [556] [554] [622]

Similarly, no purely social differentiations based on status ranking occur in Yaruro society, except by casual deference to those of age and experience like shamans and village spokesmen, called 'capitans'. The status of women is coordinate with that of men. The complementary and coordinate units, a man and a woman, combine into a series of coordinate but semi-autonomous units, the households. A group of these constitute the Yaruro social unit, the neither endogamous nor exogamous (Murdock's "agamous") village. All these units are tied together by links of bilaterally traced kinship, with coordinate relations on both sides, the ultimate tie being the reciprocal marriage of cross-cousins. Marriage is ideally matrilocal, and occurs most frequently within the village. As a consequence, the most immediate kinship ties in the village are matrilateral, whereas kinship among the men is more diffuse. The villages themselves are tied together by kinship ties, real or imputed, as well as by marriage and visiting, but by no other ties of an all-tribal nature. People who are known to any particular village —to 'us'— are considered part of our village's family, since their kinship ties to our members can be discovered or invented freely. Persons recognized as being of our linguistic and cultural stock will be included under the general term *pumé*, but may not be considered 'of our family' unless the kinship ties are recognized. Thus there is a Yaruro people, but no Yaruro tribal unit. Even the persons included in 'our family' do not constitute a unit, since there are no cross village unifying institutions other than real or imputed bilateral kinship ties. Even these vary from 554 621 [562] [592] 621 [612] [602] [619] [612]
